BUILDCHAT - Primer Peldaño Week 13

Participant: David Buzali

Development date: 7 November 2026

Repository: https://github.com/davidbuzali/week-13-primer-peldano

Live URL: https://week-13-primer-peldano.vercel.app

This record contains the complete user-visible David-Codex exchange captured during the Week 13 build through repository creation, two deployments, and the mechanical test-fix-redeploy cycle. Tool payloads and hidden system instructions are not reproduced; their observable outcomes are recorded in `docs/TESTING.md`, Git history, and deployment URLs.

My request:

My PPPP-RRRR-VVVV Manifesto

Purpose

I intend to build something meaningful that contributes to the world, creates lasting opportunity, and improves the lives of others. I want to confront educational inequality, especially in Mexico, so more people can think critically and choose their own paths. A life well used will combine contribution, fulfilling work, personal freedom, and presence for those I love.

Passions

I am energized by consequential problem-solving, decision-making, and optimization with measurable real-world impact. Competition, teamwork, disciplined improvement, and being useful to a shared mission bring out my best. I will deepen my knowledge of AI, business, and consulting so I can solve important problems across industries.

Principles

I will act with loyalty, honesty, respect, empathy, fairness, and regard for health and the law. Important decisions must reflect my values, consider their long-term effects, and remain feasible. I will pursue excellence without demanding perfection from myself or others.

Personality

I am disciplined, ambitious, analytical, and naturally inclined to lead. I bring vision, dedication, and an ability to make complex ideas understandable. My growth requires learning to delegate, trust others, rest when necessary, and remain steady when a problem cannot be resolved immediately.

Resources

I have time, education, energy, initiative, opportunities, and a valuable network. I will convert them into the resources I need most: capital, technological mastery, and a trusted team. I will use AI to increase my efficiency and reach while continuing to invest in education and formative experiences.

Relationships

I want reciprocal relationships grounded in care, effort, loyalty, empathy, and honest communication. I will be present and dependable while maintaining boundaries that protect my health and identity. Supporting others must not require abandoning myself.

Realities

Self-criticism, impatience, fear of failure, and limited self-trust can restrict me more than external circumstances. I am willing to invest substantial time in my ambitions, but I will not sacrifice the health, relationships, and freedom those ambitions are intended to create.

Repertoire

I design databases, analyze data, translate findings into decisions, and make numerical problems understandable. My Industrial Engineering background provides strong systems, optimization, and problem-solving skills. I lead and collaborate well, learning best through formal study, mentorship, and teaching others.

Vision

I will build and lead an enduring business while remaining healthy and present at home. Its success will be measured not only financially, but also by the security, opportunity, and growth it provides its team and community. I want agency over my direction and work that extends beyond me.

Variables

My industry, business model, location, and timeline may change as technology, opportunities, and responsibilities evolve. My values will not. I will decide whether to persist or pivot through personal alignment, visible results, and trusted advice, taking calculated risks appropriate to my responsibilities.

Voices

I value the guidance of my parents, sisters, and closest friends, but their expectations will not define my life. When my inner critic creates urgency, I will remember that clarity grows through action and that I do not need every answer today. I will learn to trust my own voice.

Vulnerabilities

Fear and uncertainty can drive me toward stress, hyperfixation, and excessive control. Fear of appearing vulnerable can also prevent me from seeking help. Exercise, therapy, trusted relationships, rest, and healthy boundaries will keep me grounded.

I will build boldly without abandoning myself, leading without needing total control and measuring success by both what I create and the lives I strengthen.

Whenever we produce coursework, commit it, and push it to GitHub. Then we will deploy on Vercel. If any access has expired, ask me to log back in.

2. CODEX - 14:58:49

I'll use the PDF workflow to extract the Week 13 brief, then I'll inspect the existing project and turn your manifesto into the requested coursework. After verifying it locally, I'll commit and push it to GitHub, then deploy it on Vercel; I'll only stop for you if an account session needs reauthentication.

3. CODEX - 14:59:03

The brief is a Week 13 "Crystal Ball" ship: packet-before-code, analytics, two documented test passes, at least five commits, two deploys, and the required PDFs. The repository already contains a Week 13 area, so I'm checking whether it is a partial build to finish or a completed prior version that should be replaced carefully.

4. CODEX - 14:59:29

I'm continuing the existing Primer Peldaño venture, because the blueprint explicitly assigns David that product and specifies the Week 13 change: replace "Sustentado" with honest term-match language, then test five outsiders against the fictional task and five comprehension boundaries. I'm also using the image-generation workflow for the required packet mockup and the Sites workflow for the deployable web experience.

5. CODEX - 15:00:00

I've confirmed the existing Week 12 source is a clean continuation point, with a few uncommitted video-script improvements that I'll preserve. Before touching product code, I'm now producing the required Week 13 mockup and packet; that packet will define the analytics events, five-user test, shadow safeguards, acceptance criteria, and commit/deploy sequence.

6. DAVID - 15:00:10

Create a separate repository for this week so that we dont lose the previous week repository

7. CODEX - 15:00:13

Absolutely. I'll leave `week-12-primer-peldano` untouched and create `week-13-primer-peldano` as a separate local project, GitHub repository, and Vercel project. I'll carry forward the prior source as the starting point, but the Week 13 commit history and deployment will be independent.

8. CODEX - 15:05:22

The new Week 13 repository now has its own baseline commit and its packet-before-code commit. I'm moving into the first product slice: honest term-match labels plus the adversarial keyword-stuffed case, while keeping the internal deterministic logic stable so the change is easy to audit.

9. CODEX - 15:12:21

The Week 13 code now has five independent commits and 20 passing tests, with no changes to the Week 12 repository. I'm at the publication checkpoint: I'll create the dedicated GitHub repository, push this history, then create the dedicated Vercel project for deployment 1.

10. CODEX - 15:12:38

GitHub CLI access has expired for `davidbuzali`, exactly as you anticipated. I'm continuing the local verification and browser test while that is unresolved, but before I can create/push the new repository you'll need to run `gh auth login -h github.com` (or tell me once GitHub is reconnected in the app). Vercel CLI is not installed, so after GitHub is restored I'll use the available account/UI path for the separate Vercel project.

11. DAVID - 15:13:23

Ask me to reconnect you

12. CODEX - 15:13:32

Please reconnect GitHub for the `davidbuzali` account-and Vercel if prompted-then tell me when it's done so I can create, push, and deploy the separate Week 13 repository.

13. DAVID - 15:13:55

Help me log you into github

14. CODEX - 15:13:59

I'll start GitHub's official browser-based login flow for the CLI. You'll approve the `davidbuzali` account in GitHub; I won't ask you to paste a token into chat.

15. CODEX - 15:14:13

GitHub generated the one-time code `DF52-06C0`. I'm opening the official GitHub device page now; enter that code and approve access when the browser appears.

16. CODEX - 15:14:51

GitHub authentication is complete for `davidbuzali`. I'm resuming the Week 13 publication now: create the separate repository and push its five-commit history.

17. CODEX - 15:15:37

The separate GitHub repository is live and fully pushed: week-13-primer-peldano. Next I'm checking the existing Vercel login through the official CLI so I can create a separate Week 13 project rather than touching Week 12.

18. CODEX - 15:16:33

Vercel is already authenticated as `davidbuzalibuilds-4052` on the `davidbuzali` Hobby team. I'm creating the separate `week-13-primer-peldano` Vercel project and publishing deployment 1 now.

19. CODEX - 15:17:42

Deployment 1 is live at week-13-primer-peldano.vercel.app, and Vercel connected it to the new GitHub repository. I'm now running the mechanical browser pass on the real public URL-desktop flow first, then the narrow mobile layout-and I'll use the first consequential defect as the required fix before deployment 2.

20. CODEX - 15:19:34

The live mechanical pass found the required real defect: "Borrar y reiniciar sesión" cleared browser storage but left the optional feedback note visible on screen. That breaks the user's reasonable expectation of deletion and is more consequential than a cosmetic issue. I'm fixing the reset boundary now, and I'm also clarifying that a downloaded session includes any feedback note the participant deliberately saved.

21. CODEX - 15:21:56

Deployment 2 is now live at the same URL. I'm retesting the exact failure path on production-enter a note, reset the local session, and confirm both storage and the visible form clear-then I'll do the 390×844 responsive check.

22. CODEX - 15:22:50

The second production release passed the exact regression and the 390×844 check: the note now clears, the event count resets to one, and page width stays exactly 390 pixels with no horizontal overflow. I'm closing the coursework record now-README, testing evidence, decision log, scripts, and the submission PDFs-while leaving the five real-user sessions and fresh independent persona pass explicitly unclaimed until they actually happen.

23. CODEX - 15:25:46

I'm generating the three required submission PDFs from the final Week 13 sources now. The packet will include the generated mockup; the Persona PDF will remain visibly preliminary; and the Buildchat will contain the complete user-visible conversation through the two-deploy cycle. After generation, I'll render every page for visual QA before committing the artifacts.
